Quiz & Worksheet - Tools to Measure Fertility Rates

<http://study.com/academy/practice/quiz-worksheet-tools-to-measure-fertility-rates.html>

1. What do age-specific fertility rates calculate?

- The percentage of women in a society within a society that have children.
- The number of children born to every 1000 women within an age group of 1-5 years in a single calendar year.
- The total number of children born in a calendar year to women within a specific age group in a society.
- The number of children born to married couples within a calendar year.

2. Why do most fertility measurements only use the number of women between the ages 15 and 49?

- These are considered to be the ages during which women are generally able to have children.
- Women within these brackets tend to be less fertile than women outside this age range.
- It is very difficult to find statistics on women outside of these range brackets.
- Most demographic tools do not use this age range for women.

3. In the broadest terms, what do demographers study?

- The fertility rates of agricultural crops
- Demolition
- Population statistics
- Farming practices
