

Burning Bush: A Fire History Of Australia

BURNING BUSH

A Fire History of Australia

STEPHEN J. PYNE

Pyne traces the impact of fire in Australia, showing that it has been a powerful environmental determinant, shaping both social and natural histories.

"Aborigines and eucalyptuses in effect worked together to make Australia one of the premier fireescapes of the planet. Even today the burning bush remains a perennial challenge on the vast island continent."—from the Foreword by William Cronon

"This is a phenomenal piece of research and writing, an epic that moves from prehistoric geology to contemporary firefighting theory and draws on an array of natural and social sciences to do so. This is geographical writing at its best and most exhaustive and will intrigue anyone interested in Australia, the environment or human civilization."—*San Francisco Chronicle*

"*Burning Bush* is an impressive piece of scholarship, ambitious in scope and style. . . . It offers an evolutionary panorama as well as detailed biographical studies and presents a powerful Australian perspective on world environmental history."—*Australian Historical Studies*

"Mr. Pyne, showing what a historian deeply schooled in environmental science can contribute to our awareness of nature and culture, has produced a provocative work that is a major contribution to the literature of environmental studies."—*New York Times Book Review*

"Stephen Pyne is a great storyteller, and here he weaves as fine a tale as one could imagine about a phenomenon as seemingly ordinary as fire."—*Natural History*

Stephen J. Pyne is professor of history at Arizona State University. He is the author of ten books, including *Vestal Fire: An Environmental History, Told through Fire, of Europe and Europe's Encounter with the World*.
